MOLYDUVAL GmbH

Special Lubricants

Product Overview

Text on Page 2+3

MOLYDUVAL Special Lubricants

Are high-quality oils and greases for machines and systems, with which friction can be reduced under difficult operating conditions and lifetime can be increased.

MOLYDUVAL is recommended if a safe lubrication with conventional products cannot be ensured.

MOLYDUVAL a term for certificated quality products "Made in Germany" for 50 years"

Heavy Duty Greases

Protect bearings in heavy mechanical engineering, in steel plants, in shipbuilding and mining. Greases with MoS₂ or Graphite offer maximum wear protection and emergency lubrication.

High Temperature Oils

Protect oven chains and temperature loaded gears and bearings. Products with low evaporation rates, high flash points and no residue forming offer security and lifetime.

Solid Lubricants

Offering dry lubrication where no oils or greases can be used, e.g. in space or in vacuum. Added to grease, oils or thermoplastics they increase wear protection and decrease friction. For example at heavy loaded gearboxes or oil-free plastic gears.

Food Machinery

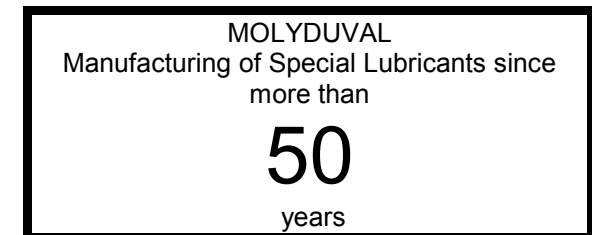

Are nowadays lubricated with food compatible H1 lubricants. Synthetic greases, compressor, transmission, gear and hydraulic oils are the modern development and the experience of MOLYDUVAL.

Corrosion Protection

Is optimizable under all conditions. A wide palette of products from invisible films to thick layers of wax or varnish – protection means that the optimal product is used.

Special Developments

Under quite special conditions, if compatibility with chemicals or plastics is required or combinations of unusual conditions occur. Use our experience of research and know-how!
